Convert raster images such as JPEG, TIF, etc. to raster CGM.

Convert raster images to raster CGM:

Do you need to get ALL your graphic data into a single, non-proprietary format?

Then **Convert: Image to CGM** is for you.

CGM is commonly thought of as a vector format, but it also includes support for raster. Convert: Image to CGM re-encodes over 50 different raster formats into raster CGM.

It is NOT a raster to vector converter, and you will not be able to edit components after conversion.

If you have to deliver graphics in the CGM format, Convert: Image to CGM will solve that problem with a minimum of fuss.

Platforms:

Microsoft Windows XP/2000/NT and SUN, SGI (UNIX converters operate in "command line" mode providing flexible integration to meet work flow requirements.)
